There will be four eclipses in 1912, two of the Sun, and two of the Moon, as follows:

I. Partial of the Moon April 1, invisible in the U.S.

II. Central and total of the Sun April 17. The Sun will rise more or less eclipsed throughout most of the Southern, Eastern and Middle States; the eclipse will be wholly visible, but small and on the Sun's southern limb. Beginning at Boston at 5:39 mo, and ending at 7:01 mo., ends New York City 6:32 a. m.

III. Partial of the Moon Sept. 26, Moon setting as the eclipse begins at Washington, D. C. The eclipse will be small; invisible in the extreme Eastern portions of the United States. Begins, Cent. Stand. Time, 5:03 morn.

IV. Total of the Sun Oct. 10. Visible in the U. S. only as a very small eclipse on the Sun's southern limb. In the Gulf States the Sun will rise with the eclipse on. Throughout most of N. and S. Carolina the whole of the eclipse will be visible just after sunrise, but it will be extremely small—scarcely more than a contact of limbs.

PLANETS BRIGHTEST.

MERCURY, brightest March 16-24 and Nov. 20-27, as eve. star. Also Jan. 6-12, Sept. 12-18, and Dec. 27-Jan. 5, (13) as a morn. star.

a morn. star.

VENUS, not brightest this year, but will be brightest of
